

Systematic Protection

Installation Instructions

- For transportation: boards should be piled exactly in-line, carefully according to cut
- Before installation: check floor is clean
- Lay starting from one side end
- Boards to install with print on top
- Easy to cut: for edges, around pilars, angles ect.
- After installation cover boards with Rele sensitive tape to prevent the underground from staining
- Cleaning: use high-pressure water blaster, hang up for drying

rent or buy on request

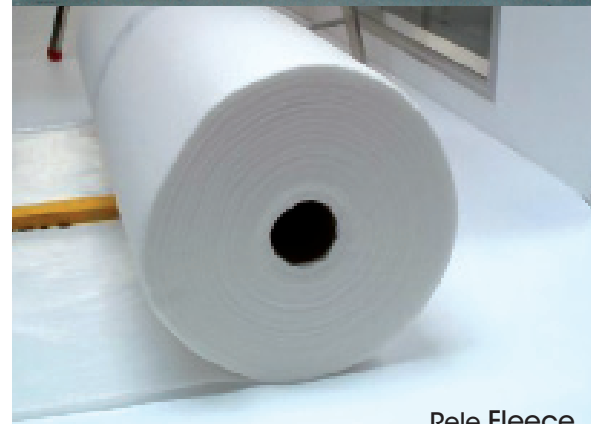

2.000.000 sqm protected floors in Europe are grateful to us

Skylink Wien

Protection systems for Construction

airport, Vienna

Rele Fleece

Messe Wien

underground, Vienna

An ideal protection for floors on construction sites. The unique Rele-Clip-System makes the laying of the protection boards very easy.

advantages

- easy laying through unique Clip System
- systematic protection of all stone and wood floors as well as hard floor and soft floor coverings
- low weight compared to other materials (1 sheet = 1 kg = 0,83 sqm)
- easy to store and ship
Euro-pallet size = 1200 x 800 mm and only 4,0 mm thick
- high pressure resistance, can take heavy loads (roll-scaffolding or machines)
- due to the transparency of the boards installations below can easily be found
- re-usable 10 times (average)
- suitable for printing

underground, Vienna
